## 2016-2017 Actuarial Exam Passers

*February 24, 2017*

The formal discipline of Actuarial Science can trace its origins to mathematicians in the 1600s, though transactions that can now be called insurance have been documented throughout history. In the 17<sup>th</sup> century, the preeminent astronomer and physicist Edmond Halley calculated the trajectory of what became known as Halley's Comet; Halley also created one of the first mortality tables and devised various methodologies in actuarial mathematics, including the pricing of life annuities. Over time, Actuarial Science has developed into a highly quantitative business field whose professionals must demonstrate sharp problem-solving skills and strategic thinking. To become credentialed as an actuary in the Casualty Actuarial Society or the Society of Actuaries, one must take a series of professional actuarial exams.

Presented here are the students who passed professional actuarial exams in 2016. We are thrilled for their success!
